

Don Bierut - Bedford Heights City Engineer (440) 439-1999

22999 Forbes Road, Unit B

Bedford, Ohio 44146

**Chagrin Valley Engineering, Ltd.** is located in the Village of Oakwood, Ohio and was formed in response to the dynamic changes taking place in the civil and environmental engineering profession. We serve public and private clients and provides a wide array of services including site development, civil engineering, surveying, as well as specialized services including wetland delineation and permitting, erosion control, stormwater management, and noise barrier design. We believe that civil engineering and surveying should be provided with the interest of the client in mind, not the one size fits all mentality typically associated with design. We look at solutions that will provide a quality and functional project and meet the long-term financial resources of the client.

Chagrin Valley Engineering, Ltd. currently serves as the Municipal Engineer in twelve municipalities. These municipalities include:

- Bedford Heights
- Brunswick
- Lyndhurst
- Maple Heights
- Pepper Pike
- Village of Bentleyville
- Village of Bratenahl
- Village of North Randall
- Village of Oakwood
- Village of Moreland Hills
- Village of Walton Hills
- Village of Woodmere

Our role as Municipal Engineers allows us to develop road, storm sewer, and wastewater improvement programs for the communities we serve and other communities who need projects monitored on an as-needed basis. These project solutions take into account many of the factors important to residents and municipal representatives such as construction disturbance, access to businesses during construction, minimizing loss of trees and landscaping, and of course, providing a high-quality engineered project.
